

SC-240

Hydrogen Sulfide Control

SRB/H₂S Deactivation Agent

Description SC-240 is a concentrated H₂S deactivation agent commonly used to reduce H₂S in well test and flowback fluids during offshore well testing operations.

Properties	Form: Liquid	Chemical Family: Amine
	Color: Yellow	Solubility: Water
	Odor: Ammonia	Weight: 8.56 lb/gal
	Charge: NA	Flash Point: >200°F (93.3°C)

Application SC-240 is injected down the backside of producing wells or in the flow stream of well test separator units to neutralize the H₂S prior to discharge of fluids and gas, overboard or to the burner.

Compatibility SC-240 is a liquid H₂S neutralizer that can be injected with most chemical injection pump systems.

Handling SC-240 is a non-regulated liquid. Keep drum tightly sealed to prevent evaporation and contamination. Refer to the Material Safety Data Sheet (MSDS) for handling and hazard data.

Packaging SC-240 is available in 55 gallon poly drums.
